TWEDDLE FABRICATIONS LTD

manufacturers of the **Agr iquip**[™] range of products

Tweddle Fabrications are the manufacturers of the "Agr iquip" range of materials handling equipment.

Our objective is to produce high quality equipment which will stand the test of time and hard work, representing excellent value for money

Coming originally from a farming background, and having spent over twenty years repairing all manner of agricultural equipment and adapting machines to address the customers problems we believe that we have used this experience and knowledge in the design of our own range.

Situated as we are in a rural community we can see our products at work and assess their effectiveness and suitability to the work being asked of them. We pride ourselves on our ability to listen to our customers needs and requests and our capability to provide the very best of service.

As well as our set product range we also offer a "made to measure" design and manufacturing service.

See back of booklet for Terms & Conditions.
